

How to build and use Minesweeper

EECS 581 Group 11 – Project 1

1. Install Node.js to your system if it is not already installed.
View <https://nodejs.org/en/download/current> for information about installing Node.js on your system.
2. Clone, or download and extract the repository and cd into the repository folder.
3. Run “npm install” to install all build dependencies for the project.
4. Once complete, run “npx webpack” to build the application.
5. The finished application is now built at /dist/index.html. (Do not use /src/index.html)
